TECHNICAL SKILLS

Languages: Go, Java, Python, SQL, TypeScript, JavaScript (ES6)
Backend & Data: Spring Boot, Django, Node.js, Kafka, PostgreSQL, MongoDB, Redis
Cloud & DevOps: AWS (S3, Lambda, EMR, Bedrock), Kubernetes, Docker, CI/CD (GitHub Actions)
AI & Search: RAG pipelines, OpenSearch, pgvector, LangChain, LangGraph
Frontend: React, Angular, Tailwind CSS

EXPERIENCE

Software Development Intern Jun 2023 – Oct 2023
Drishiti Software Solutions Kolhapur, India
– Diagnosed sequential query patterns and missing indexes in an **Oracle Data Integrator** ETL pipeline; restructured jobs with batch processing and targeted indexes to improve ingestion throughput by **25%**.
– Added quantitative analysis features to a **Laboratory Information Management System**, cutting reporting turnaround by **15%**.
– Created real-time dashboards in **ZKoss** so teams could track operational quality metrics without manual reporting.

Full Stack Development Intern Jun 2022 – Jul 2022
Mobileware Technologies Pvt Ltd Mumbai, India
– Delivered a CEO-facing analytics dashboard; reduced weekly reporting turnaround time by **30%**.
– Implemented **Spring Boot** REST APIs backed by **MySQL** (CRUD + validation + error handling) for internal enterprise workflows.
– Built interactive KPI charts using **Angular** and **Apex Charts** to support stakeholder reviews and decision-making.

Back-end Development Intern Jan 2022 – Apr 2022
Cleverground Pvt Ltd Pune, India
– Worked on backend services for analytics, live lectures, and notifications using **Django** and REST APIs.
– Triageed production issues and shipped fixes, reducing recurring backend bug reports by **20%**.
– Updated internal documentation (setup + API notes), helping new developers ramp up faster.

PROJECTS

Zelyx | AI Proxy & Observability Platform | <https://zelyx.app>
– **AI proxy** and observability platform that routes **LLM** calls through a self-hosted proxy, giving teams **real-time spend tracking** and full audit trails without touching existing application code.
– **Gate engine** enforces per-key **budget caps**, model allowlists, and **payment-risk signals**; non-compliant calls are blocked before they reach the provider.
– Built a **Next.js 15** dashboard with real-time cost, latency, token usage, and error breakdowns across teams, projects, and models.

CodeContext MCP | github.com/Abhishek-701/codecontext-mcp
– Built a live-indexed codebase context server exposing five structured tools over **MCP** so LLM agents can query codebases that exceed context window limits.
– Implemented a file watcher with **watchdog** and debounce logic; used **tree-sitter** to parse Python and JavaScript files and extract symbols (functions, classes, methods) into **PostgreSQL**.
– Added semantic search using **pgvector** and **sentence-transformers** alongside exact lookups by symbol name and file.

FinSight | finsight-vh4y.onrender.com
– Built a **RAG** agent over SEC 10-K filings combining **BM25** and dense retrieval; added an **XBRL** fast path for structured financial lookups to cut latency on numeric queries.
– Implemented three refusal layers to block hallucinated answers. The agent declines when retrieval confidence falls below the threshold rather than fabricating a response.
– Hybrid retrieval pipeline merges **BM25** keyword matches with **sentence-transformers** embeddings stored in **ChromaDB**, re-ranked before passing context to the LLM for synthesis.

EDUCATION

University of Illinois Chicago Chicago, IL
Master of Science in Computer Science — GPA: 3.78/4.00 Aug 2024 – May 2026

University of Mumbai Mumbai, India
Bachelor of Engineering in Computer Engineering — GPA: 8.81/10 Aug 2019 – May 2023
